International Parenting Survey—Canada (IPS-C)

Tables for Partners

Partner agencies are invited to assist in recruitment of participants by posting a notice about the IPS-C on websites, and in newsletters. As the survey invites participants to give the first three digits of their postal code, it will be possible to prepare tables for partner agencies that show the results for the entire Canadian sample, as well as for participants within a specific geographical region, identified by the first three letters of a postal code.

At the end of data collection, IPS-C uOttawa will prepare ten summary tables to partner agencies who have recruited at least 100 participants. The summary tables will provide the data for the entire Canadian sample, as well as for the postal codes specified by the partner agency.

Table 1. Sample characteristics

This table gives basic demographic information on the sample.

Table 2. Emotional and behavioural problems

This table is based on responses to the Child Adjustment and Parent Efficacy Scale (CAPES) and shows scores for Behavioural Adjustment, Emotional Adjustment, and Total Adjustment.

Table 3. Parents’ confidence in managing emotional and behavioural problems

This table is based on responses to the CAPES and shows parents’ sense of efficacy in dealing with emotional and behavioural problems.

Table 4. Parenting Practices.

This table is based on responses to the parenting practices subscale of the Parent and family Adjustment Scale.

Table 5. Parent adjustment, Family Relationship and Couple Relationship

This table shows parents’ responses to the Parent adjustment, Family Relationship and Couple Relationship views about the extent to which parenting is private, and parents’ views about the acceptability of spanking.

Table 6. Current service use

This table shows the percentages of parents who consulted different types of professionals about their child’s problems in the last 12 months.
Table 7. *Awareness of parent training programs.*

This table shows the percentages of parents who have heard of and the percentages who have participated in different parent training programs.

Table 8. *Barriers to participation*

This table shows the obstacles parents reported with respect to parent training.

Table 9. *Satisfaction with parenting support*

This table shows parents’ satisfaction with information and services about parenting.

Table 10. *Preferences for parent services*

This table shows the extent to which parents view different formats for parent services as valuable.

Partner agencies are invited to specify up to 2 demographic variables of particular interest to them, for finer-grained analysis. For example, they may wish to have data presented separately for mothers and fathers, or separating children into pre-school and primary school age, or separating according to ethnic group.

In the Partner Recruitment Plan, you will be asked to identify the first three digits of the postal codes that fall within the catchment area for your agency as well as the two demographic variables for finer-grained analyses:

- child age
- child gender
- parent age
- parent gender
- family type
- marital status
- parent education
- parent employment status
- ethnic background
- immigrant status
